EXP 8	User Management and Role-Based Access Control (RBAC)

AIM

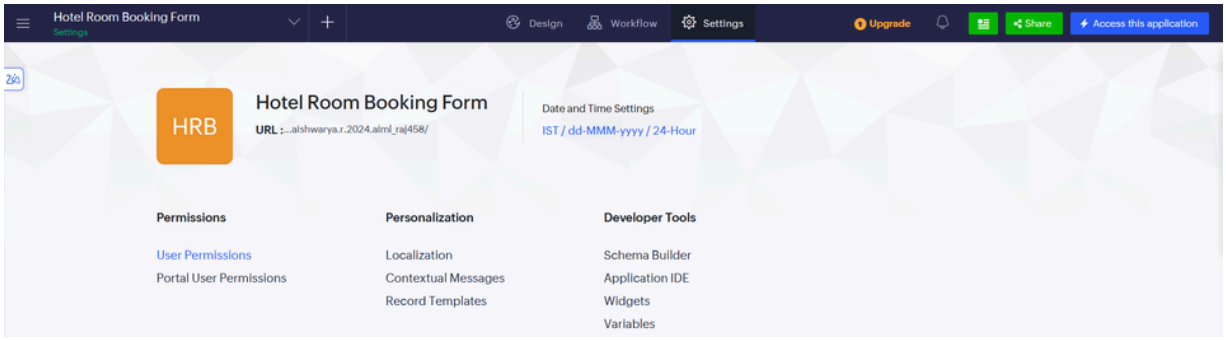

To implement User Management and Role-Based Access Control (RBAC) in the Hotel Room Booking application in Zoho Creator to manage user permissions and control access based on roles

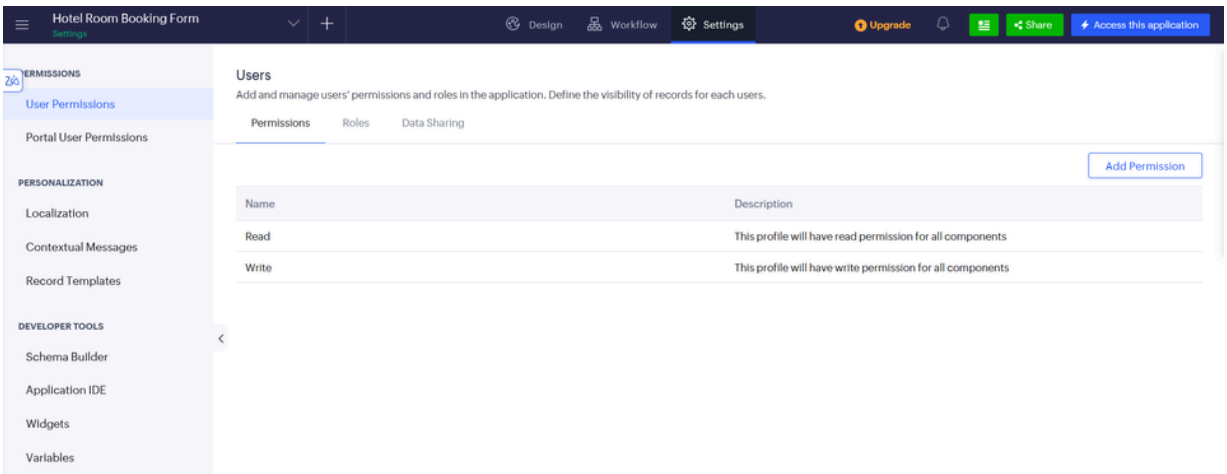

PROCEDURE

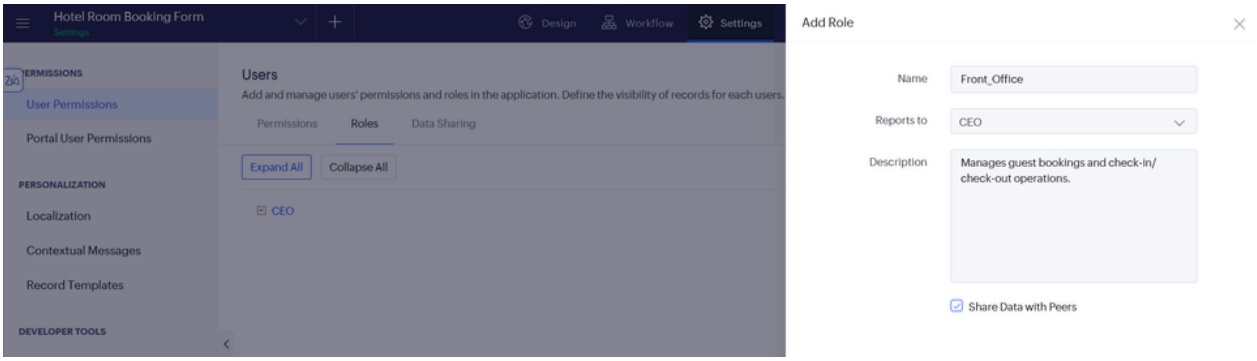

1. Opened the Hotel Room Booking application in Zoho Creator.
2. Navigated to Settings → User Permissions.
3. Examined the available permission profiles, such as Read and Write.
4. Opened the Roles tab to view the existing roles and hierarchy.
5. Explored the option to add a new role with a role name, reporting hierarchy, and description.
6. Reviewed permissions for forms, reports, and other application components.
7. Examined the Data Sharing settings to understand how record visibility can be controlled.

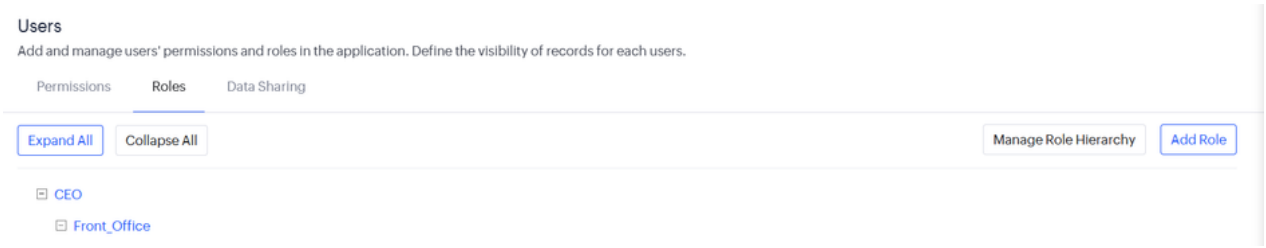

OBSERVATION

The available user-permission profiles, role hierarchy, and data-sharing settings were examined. These settings demonstrated how access to the Hotel Room Booking application's components and records can be controlled based on user roles.

CONCLUSION

Thus, the user-management and role-based access-control settings in Zoho Creator were examined. Further role creation could not be completed due to the account's role limit.
