EXP 9	AI and Analytics Using Zia

AIM

To study the AI capabilities of Zia and explore data analysis and insights in the Hotel Room Booking application using Zoho Creator.

THEORY

zia is Zoho's AI assistant that helps analyze application data, identify patterns, and generate insights.

Key features include:

- Data Analysis: Identifies booking trends and patterns.
- Charts and Reports: Visualizes room popularity and booking statistics.
- Predictions: Available AI features may help predict booking trends.
- Natural Language Interaction: Supported Zia features allow users to query data using natural language.

PROCEDURE

1. Logged in to Zoho Creator and opened the Hotel Room Booking application.
2. Added sample guest and booking records.
3. Navigated to the Reports section.
4. Created charts and summary reports to analyze booking data.
5. Explored the available Zia and AI-powered features.
6. Analyzed room popularity, booking trends, and guest statistics using reports and visualizations.
7. Verified the displayed insights against the existing booking records.

APPLICATION

In the Hotel Room Booking application, analytics helps identify popular room types, monitor booking trends, analyze guest statistics, and support decisions regarding room availability, pricing, and hotel operations.

CONCLUSION

Thus, the AI and analytics capabilities of Zia in Zoho Creator were studied. Reports and visualizations were used to analyze hotel booking data and support informed decision-making.
