Data Modelling and Form Design for a Business Application in Zoho Creator

AIM

To design the data model and create forms for a business application using Zoho Creator. (Basic and Advanced Fields)

PROCEDURE:

1. Logged in to the **Zoho Creator** account.
2. Opened the **Hotel Booking System** application.
3. Created a Customer form using the drag-and-drop form builder.
4. Added customer fields such as **Customer Name, Phone Number, Email, Address, Identity Details, Check-in Date, Check-in Time, Room Preference, Meal Preference, Special Requests, and Terms & Conditions.**
5. Saved the Customer form and verified that all fields were displayed correctly.
6. Created a **Room form.**
7. Added room-related fields such as **Room Type, Room Number, Room Price, Room Status, Room Capacity, and Floor Number.**
8. Saved the Room form.
9. Created a Booking form to manage hotel reservations.
10. Added **lookup fields** to link the Customer and Room forms with the Booking form.
11. Configured the required field properties and validation rules.
12. Tested the forms by entering sample data.
13. Verified that the data was stored successfully and that the relationships between the forms worked correctly.
14. Saved the application and confirmed the successful creation of the data model.

The screenshot displays the Zoho Creator interface for a 'Hotel Room Booking Form'. The main workspace shows the 'Room_Booking_Form' in design mode. The form is divided into two main sections: 'Guest Details' and 'Contact Details'. The 'Guest Details' section includes fields for 'Guest_Name' (split into 'First Name' and 'Last Name'), 'ID_Proof_Number', and 'Number_Of_Guests' (with a value of '1'). The 'Contact Details' section includes 'Email_Address' and 'Contact_Number' (with a value of '+91 81234 56789'). A blue button labeled 'Open Form Builder' is visible next to the 'ID_Proof_Number' field. On the left, a sidebar shows the application structure with 'Room_Booking_Form' selected. On the right, a panel titled 'Form Customization - Web' shows options for 'Label placement'. The bottom status bar indicates 'Trial has expired' and provides links for 'Upgrade', 'Help', and 'Access this application'.

OBSERVATION

The Customer, Room, and Booking forms were created successfully using suitable field types. Lookup fields established relationships between the forms, making data entry simple and organized.

CONCLUSION

The experiment demonstrated how Zoho Creator simplifies data modelling and form design using its visual interface. The Customer, Room, and Booking forms were successfully connected, providing a well-organized structure for the Hotel Booking System.
